Above dimensions/weight only to be used as guidelines and may vary from Carrier to Carrier

The cubic volume of a shipment is established by applying the greatest length, width and height of the package:

1. Inches to Kilogrammes

To obtain the cubic volume, multiply length by width by height and then divide by 366 to establish volumetric weight

2. Centimeters to Kilogrammes

To obtain the cubic volume, multiply length by width by height and then divide by 6000 to establish volumetric weight.

The greater of either the volumetric or the actual shall be the declared chargeable.
